CLINICAL TRIAL SUPPLIES

WE ARE DEDICATED TO QUALITY –  
SUPPLIES FOR CLINICAL TRIALS

## EXPLANATION SHEET

TOPIC

LOGISTICS

### INFORMATION

Logistics during clinical trials is far more than simply sending a box. Good logistics are demanding and labour-intensive. We have a strong background in handling laboratory and medical equipment.

Getting materials to the sites on time, handling country-specific provisions as well as choosing the best packaging for the individual piece of equipment is our claim.

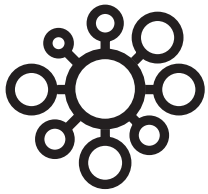

For us, careful communication with our customers is the initial key to obtain all the relevant details to get the equipment where it is needed and when it is needed.

### PACKAGING

- With our **flight cases**, economic shipping costs and maximum convenience do not exclude each other.
- Our flight cases are **tailored for each piece of equipment** and make packing and unpacking a piece of cake: Every item fits snugly into its fixed place – forget about cardboard boxes, filling materials and tape.
- During transport, the flight cases offer maximum protection while the castors make it very easy to move the flight case within the building.

And what we also like about them: They look great!

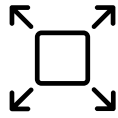

## EXPLANATION SHEET - LOGISTICS

### CHOICE OF CARRIER

Depending on the equipment and destination, we chose the best suited carrier:

- For **small equipment** that can easily be handled and transported within the building by one person, we usually chose courier

- **Large, bulky and heavy equipment** is a different story: Simply dropping of a heavy piece of equipment like a freezer or a centrifuge packed in a large box on a pallet on street level is the service provided by regular shippers, though this is usually not an option for the sites involved in clinical trials.

Often enough, sites do not have the means to transport the equipment within the building to the point-of-use.

### SOLUTION

### WHITE GLOVE SHIPPING SERVICE

The most convenient, hassle-free solution is our white glove shipping service.

- The carrier makes an appointment and delivers the equipment with two people right up to the point-of-use, for instance into the laboratory or examination room, where the equipment is unpacked.
- The site can also decide where the equipment should be placed (i.e. on a lab bench, under a table etc.).
- Also, the carrier takes care of removing and disposing of the packaging so there is no need for the site to store large shipping boxes or shipping crates for the return of the equipment as storage space always is an issue.
- At the end of the trial, the site does not need to take care of packing the equipment, either.
- The carrier simply picks up and packs the equipment for a safe return trip to our warehouse.

Shipping has never been easier than with our **white glove shipping service** and your sites will love it.
